#### 38 Financial risk management

#### (i) Risk management framework

The Company's principal financial liabilities comprise borrowings, trade and other payables and other financial liabilities. The main purpose of these financial liabilities is to finance the Company's operations. The Company's principal financial assets include trade and other receivables, cash and cash equivalents, and other financial assets that derive directly from its operations.

The Company is exposed to market risk, credit risk and liquidity risk. The Company senior management oversees the management of these risks. The Company's senior management reviews the financial risks and the appropriate financial risk governance framework for the Company. The Company financial risk activities are governed by appropriate policies and procedures and that financial risks are identified, measured and managed in accordance with the Company's policies and risk objectives.

#### (ii) Credit risk

Credit risk is the risk that counterparty will not meet its obligations under a financial instrument or customer contract, leading to a financial loss. The Company is exposed to credit risk from its operating activities (primarily trade receivables) and from its other activities including derivative contracts. The Company generally deals with parties which has good credit rating/ worthiness or based on Company internal assessment. The Company's maximum exposure to credit risk is limited to the carrying amount of following types of financial assets

- cash and cash equivalents,
- trade receivables, and
- other financial assets carried at amortised cost

#### a) Credit risk management

The Company assesses and manages credit risk based on internal assessment, continuously monitoring defaults of customer and other counterparties, identified either individually or by the Company, and incorporates this information into its credit risk controls. Internal credit assement is performed for each class of financial instruments with different characteristics.

The Company's treasury, in accordance with the board approved policy, maintains its cash and cash equivalents, deposits and investment in equity - with banks, financial and other institutions, having good reputation and past track record, and high credit rating. Similarly, counter-parties of the Company's other receivables carry either no or very minimal credit risk. Further, the Company reviews the credit-worthiness of the counter-parties (on the basis of its ratings, credit spreads and financial strength) of all the above assets on an ongoing basis, and if required, takes necessary mitigation measures.

#### (iii) Liquidity risk

Liquidity risk is the risk that the Company will encounter difficulty in meeting the obligations associated with its financial liabilities that are settled by delivering cash or another financial asset. The Company's approach to managing liquidity is to ensure, as far as possible, that it will have sufficient liquidity to meet its liabilities when they are due, under both normal and stressed conditions, without incurring unacceptable losses or risking damage to the Company's reputation

The Company believes its revenue, along with proceeds from financing activities will continue to provide the necessary funds to cover its short term liquidity needs. In addition, the Company projects cash flows considering the level of liquid assets necessary to meet liquidity requirement.

The company has also entered into supply chain finance arrangement to smoothen the payment process of the suppliers. Although the payment terms are not significantly extended beyond the normal credit terms agreed upon with other suppliers, the arrangement helps in making the cashflows more predictable.

#### iv Market risk

Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises four types of risk: Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: Currency risk, interest rate risk and price risk.

#### a) Currency risk

Foreign currency risk is the risk that fair value of future cash flow of an exposure will fluctuate because of changes in foreign exchange rates. The Company's exposure to the risk of changes in foreign exchange rates relates primarily to the Company's operating activities. The Company has foreign currency trade payables and is therefore, exposed to a foreign exchange risk.

The company evaluates exchange rate exposure arising from foreign currency transactions and Group follows established risk management policies including the use of derivatives like foreign exchange forward and future contracts to hedge exposure to foreign currency risks.

Foreign currency exposures recognised by the Company that have not been hedged by a derivative instrument or otherwise are as under:

# b) Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The Company's exposure to the risk of changes in market interest rates relates primarily to the Company's long-term and short-term debt obligations with floating interest rates.

### Exposure to interest rate risk

Below is the overall exposure of the Company to interest rate risk:

#### (ii) Measurement of fair values

The different levels of fair value have been defined below:

Level 1: Level 1 hierarchy includes financial instruments measured using quoted prices for instance listed equity instruments, traded bonds and mutual funds that have quoted price.

Level 2: The fair value of financial instruments that are not traded in an active market (for example, traded bonds, over-the counter derivatives) is determined using valuation techniques which maximize the use of observable market data and rely as little as possible on entity-specific estimates. If all significant inputs required to fair value an instrument are observable, the instrument is included in level 2.

Level 3: If one or more of the significant inputs is not based on observable market data, the instrument is included in level 3.

There have been no valuation under Level 1 and Level 2. There has been no transfers into or out of Level 3 of the fair value hierarchy for the period ended September 30,2025, year ended March 31, 2025 and period ended September 30, 2024.

#### Valuation process and technique used to determine fair value

a) The fair value of investments in mutual fund units are based on the net asset value ('NAV') as stated by the issuers of these mutual fund units in the published statements as at each reported balance sheet dates. NAV represents the price at which the issuer will issue further units of mutual fund and the price at which issuers will redeem such units from the investors.

b) The fair value of investment in equity instrument is derived using valuation methods which includes earnings multiple approach and discounted cash flows.

#### 40 Capital management

The Board's policy maintains a strong capital base so as to maintain investor, creditor and market confidence and to sustain future development of the business. The Board of Directors monitor the return on capital employed as well as the level of dividend to shareholders.

For the purpose of the Company's capital management, capital includes issued equity capital general reserves attributable to the equity holders. The primary objective of the Company's capital management is to maximise the shareholder value.

The Company monitors capital using a gearing ratio, which is net debt divided by total capital plus net debt. The Company includes within net debt, interest bearing loans and borrowings, , less cash and cash equivalents.
